

ASU LDT interview study guide

Academic Associate pool, Learning Design and Technologies · Tuesday 22 September 2026 · 30 minutes, Zoom · Mary Lou Fulton College for Teaching and Learning Innovation

Read this first. ASU describes these pool positions as teaching **one or two courses per semester under a course or program coordinator** who supplies the syllabus and assignment guidelines. The master course already exists. This is an adjunct teaching role, not a course-building role. Lead with teaching, presence, feedback and student support. Ask about the design line, do not assume it.

WHO IS IN THE ROOM

Leanna Archambault, Ph.D.

Professor, Learning Design and Technology · Program Coordinator, LDT · Editor, *Computers & Education*

- She is the one who emailed. Program coordinator, so she owns the pool.
- Research: K-12 online and blended learning, teacher preparation for online teaching, **TPACK** (co-author on the widely cited "Revisiting technological pedagogical content knowledge"), sustainability education, and "online teacherpreneurship"
- Co-author of **"Pillars of Online Pedagogy: A Framework for Teaching in Online Learning Environments" (2022)**. Worth skimming before Tuesday. It is the most likely shared vocabulary in the room.
- **The gift:** she published **"Listening to Adjunct Faculty Voices: A Case Study for Supporting Adjunct Faculty Across Career Stages at a Small Community College" (2026)**. She studies exactly the population Michelle is part of. This is the single best hook available.
- Also 2026: "Teachers' doings in the AI era: From transmission to relation"
- Former middle school teacher. Teaches LDT 501, 503, 301, 511.
- Say **"Editor of *Computers & Education*,"** not Editor-in-Chief. The masthead title could not be verified at the publisher.

[ASU profile](#) · [LinkedIn](#) · [Google Scholar](#) · [Personal site](#) · [Computers & Education](#)

Steve Salik, Ph.D.

Clinical Associate Professor, LDT · Coordinator, LDT M.Ed. and LDT Graduate Certificate

- He coordinates the M.Ed. So in practice he is likely the person whose courses she would teach and who would supervise her.

- Built ASU's Online MBA infrastructure; formerly directed Online Academic Services at W. P. Carey.
- **His signature project: AI mentors in the LDT M.Ed.** Digital partners built to reflect the knowledge base of instructional experts, meant to *supplement not replace* instruction, and to let LDT students experience AI as learners while thinking about deploying it as designers. Showcased at the college's AI Carnival, Dec 2025.
- Interests: instructor presence, student support, feedback, engagement, scenario-based learning, evidence-based design, video production.
- Also coordinates the Mastercard Foundation e-Learning Scholars Program across ten partner institutions.
- Teaches LDT 504, 506, 513, 593.
- No publication list on his ASU profile. Do not reference one.

Angel Morgan, Ph.D.

Assistant Instructional Professional, LDT · Program Coordinator, Educational Studies – Instructional Design

- Ph.D. in Learning Design and Technology, NC State, 2022. Prior senior roles at **Purdue** and **2U**.
- **Accessibility and UDL is her lane.** Universal Design for Learning, assistive technology, POUR and WCAG. Advisory board for CAST's Center on Inclusive Technology in Education Systems (CITES).
- Presented "**SupPOURting Neurodivergent Learners in Canvas Courses**" at ASU's 2024 Accessibility Awareness Day. Canvas-specific accessibility work, which is directly Michelle's ground.
- Teaches fully online. LDT 301, 320, 508 (Design Accessible & Inclusive Digital Learning), 511, EDP 540.
- Careful: a different Angel Morgan, Ph.D. (dream and creativity researcher at Sofia University) has a similar LinkedIn. The one below is the ASU one.

[ASU profile](#) · [LinkedIn](#) · [Her AAAD 2024 session](#)

THE PROGRAM, IN ONE SCREEN MED LEARNING DESIGN AND TECHNOLOGIES

- 100% online, ASU Online. 30 credits, 10 courses, **7.5-week sessions**. Not a certification program.
- Serves K-12, higher ed, **corporate, healthcare, nonprofit and government**. Corporate L&D is a first-class audience, not an afterthought. Do not talk as if it is a teacher-prep program.
- Core: LDT 501, 502, 503, 504, 506, 508, 513, 523, plus an elective and LDT 593 Applied Project.

- **LDT 593:** students partner with a real external organization to design, develop and evaluate an instructional program. Framed as student to practitioner.
- **AI:** program materials say students "work with AI as both a creative partner and a personal mentor," integrated across coursework and portfolio.
- Everything runs through ASU's **Principled Innovation** framework. Name it once.
- **The college renamed in 2025:** Mary Lou Fulton Teachers College is now the **Mary Lou Fulton College for Teaching and Learning Innovation** (MLFC). Use the current name.

Accuracy check before Tuesday. The resume in this folder, `blomberg_resume_asu.pdf`, was created 18 April 2026, the same day the Interfolio application went in. It contains the line "Led formal RFP evaluation and district-wide migration from Blackboard to Canvas for 250,000+ users." **That is the claim on the do-not-say list.** Interfolio logs the upload only as "Blomberg_CV" so it is not certain this exact file is what they read. Check the Interfolio dossier. If it is in there, have the correction ready and delivered calmly: "I led the campus LMS team and contributed to the RFP that led to Canvas adoption. I was not on the migration team." Do not amplify, do not over-apologize, move on.

OPENING PITCH TELL ME ABOUT YOURSELF · WHY THIS PROGRAM · WHY PART-TIME

The core (some mix of these, every time)

- Full-time community college faculty in digital media arts, 20+ years teaching fully online
- M.Ed. in educational technology, graduate research in connectivism and personal learning environments
- Quality Matters and OSCQR lead reviewer; eCourses lead for her department, supporting about 30 instructors
- Co-chairs the student support and success domain of the Maricopa district AI committee
- Builds AI tools for students and faculty herself, in Canvas and around it
- The "students as users" frame: she designs courses as learning experiences, not content delivery
- **Yourself:** I have been full-time community college faculty for a long time, teaching entirely online, and the through-line has been designing the experience rather than just the content. I did my M.Ed. in ed tech on connectivism and personal learning environments, and I have spent the last several years on the faculty-development and quality side, reviewing courses to OSCQR and Quality Matters, and lately building AI tools for our students and faculty.
- **Why the LDT program:** two reasons. One, I am the practitioner your graduates become. I do this work in a real institution, at scale, under real constraints, and I can bring that into a class of people who are mostly doing it in their own organizations. Two, the AI and accessibility work in this program is where I already live, so I would not be catching up on it.
- **Why part-time on top of a full-time job (they will ask, be ready):** Be direct. I have taught fully online my whole career, so this is the same modality and the same rhythm I already run. A

7.5-week session at one or two courses is a load I have carried before alongside a full schedule. And I want to teach graduate students who are practitioners, which my current role does not give me. Do not be defensive and do not oversell the capacity.

THE QUESTIONS THEY ARE MOST LIKELY TO ASK ADJUNCT POOL, 30 MINUTES, THREE PEOPLE

1 Tell us about your online teaching experience.

- 20+ years teaching fully online, not emergency-remote, by design
- Every course built from scratch: outcomes written first, assessments aligned to them, built in Canvas, videos written and produced herself, captioned
- Range: 1-credit foundation course up through a capstone; software fundamentals through career readiness
- Lead reviewer on OSCQR and Quality Matters, so she teaches to a formal standard and reviews others against it
- Led the online transition support for 45+ arts and humanities faculty in 2020 and kept coaching after

2 Have you taught at the graduate level?

- **This is the real gap. Answer it straight, do not dodge or inflate.**
- Honest version: my teaching has been undergraduate. What I have done at the graduate level is the work itself, and mentoring: I mentor probationary faculty through peer review, I coach instructors on course design, and I run faculty development for working professionals.
- Pivot to the thing that is actually true and relevant: LDT students are working practitioners, and the pedagogy for adult practitioners is what I do every day in faculty development. That is closer to this than a traditional grad seminar is.
- My M.Ed. is in this field, so I have also been the student in a fully online graduate program like this one. I know what it feels like from that side.
- **Do not say** "grad students are just like undergrads." They are not, and they will know it.

3 You would be teaching a course you did not design, with a coordinator's syllabus. How do you feel about that?

- **The fit question. Get this right and a lot of the rest matters less.**
- Say yes clearly and first. Then show you understand why programs do it: consistency across sections, and it is the same reason I build our AVC 100 so any instructor can pick it up and teach it well.
- Turn it into a credential: I have been on the other side of that. I build master courses that other people teach, so I know what it costs a coordinator when an instructor drifts from the design.
- Where I would add value inside the guardrails: presence, feedback quality, the discussion facilitation, and flagging accessibility or alignment issues to the coordinator rather than fixing them unilaterally.

- Then ask the question rather than assuming: "What is the line between what an associate can adapt and what stays fixed?"

4 How do you establish instructor presence in a fully online course?

- **Salik's territory. He researches presence and feedback.**
- Weekly short video, face and voice, made for that week, not evergreen. Presence is evidence you are actually there this week.
- Feedback that names the student's specific work, not a rubric echo
- Announcements that respond to what is actually happening in the gradebook, not a schedule
- Discussion: respond to fewer posts, more substantively, and synthesize the thread at the end so students see their thinking go somewhere
- She can also mention her Discord community: 14 channels across a whole program, students stay across semesters, which builds cross-cohort mentorship Canvas discussion boards do not replicate. Good, distinctive, and true.
- Tie to research if Archambault is on the line: this is social presence in the community-of-inquiry sense. His own recent work pairs AI-generated text with human-created video to build social presence, so presence is a live question for him, not settled.

5 A 7.5-week session is fast. How do you keep up with feedback?

- Front-load: the feedback plan is part of the build, not improvised in week 3
- Tiered feedback: rubric plus one specific, personal note per student per major artifact. The personal line is the one that changes behavior.
- Turnaround commitment stated in week 1 and kept, because in 7.5 weeks late feedback is useless feedback
- Triage early: watch week-1 and week-2 engagement, reach out to the quiet ones before they are behind, not after
- Honest: in a compressed term the biggest risk is a student disappearing silently. Early outreach is the single highest-value thing an instructor does.

6 How do you handle students using AI in their work?

- **Very likely asked, and she is unusually strong here. Do not be preachy about it.**
- In an LDT program AI is the subject matter, not just a integrity risk. These students will deploy it professionally, so the class should be where they learn to use it well and critique it.
- Her position: design assessments where the thinking is visible and AI is a declared tool, not a hidden one. Ask for the process, the prompts, the revisions and the judgment calls, not just the artifact.
- What she actually does: builds with Claude via LTI in live courses, uses NotebookLM, and co-chairs the student support and success domain of the district AI committee, which is about AI and student outcomes rather than policing.

- **Hook to Salik:** his AI mentors work is exactly this, AI as supplement and as a thing students experience as learners while thinking about it as designers. If it fits, say she read about it and ask how students have responded.
- Accuracy: her tools are **prototypes and in testing**. Say that plainly. Nothing is in production.

7 How do you approach accessibility and inclusive design?

- **Morgan's lane. This is Michelle's strongest technical overlap in the room.**
- WCAG 2.1 AA as the working standard, applied from the first draft rather than remediated later
- Tooling she actually uses: YuJa Panorama, CidiLabs UDolt, hand-written Canvas-safe HTML and CSS, captioned video she produces herself
- Design-side, not just compliance-side: as a graphic designer, hierarchy, contrast and type are accessibility decisions, and they also reduce cognitive load. Mayer's signaling and coherence principles.
- The accessibility checker built into her own course tool: it applies a style guide built to WCAG 2.1 AA and parses the Canvas cartridge
- If Morgan is asking, use POUR language (perceivable, operable, understandable, robust) since that is her framing, and UDL for multiple means of representation, engagement and expression

8 How do you support a struggling online student?

- Catch it in week 1 or 2 from the analytics, not at midterm
- Personal outreach that names something specific, not a mass "checking in" email
- Route to services rather than improvising: she designs student services into the course itself as embedded learning-design elements, advising, tutoring, disability services, counseling
- The redesign example: she rebuilt the department's highest-enrollment, lowest-success course grounded in retention research, with each module introducing a campus service. Early completion moved from about 44% to 60% in two small summer sections. **Say it is early and small.**
- For graduate practitioners the failure mode is usually life and workload, not ability. Flexibility with a firm floor beats either rigidity or endless extensions.

9 Which LDT courses do you feel prepared to teach?

- Have three ready. Strongest first:
- **LDT 508** Design of Accessible and Inclusive Digital Learning. Closest match to what she does daily, and it is Morgan's course.
- **LDT 504** eLearning Design and Development. Canvas depth, video production, cartridge-level work.
- **LDT 511** Emerging Trends in Technology and Learning Design. The AI committee work and the tools she builds.
- Reasonable stretch: **LDT 503** Design of Effective Communications, given the BFA and 20 years teaching graphic design. This is the one where her design background is an asset almost

nobody else in the pool has.

- Also honest: **LDT 501** Foundations, because the M.Ed. coursework maps to it.
- Do not claim LDT 506 Evaluation or LDT 513 Needs Assessment as strengths unless asked. Say she would want to teach them after teaching alongside them.

10 What is your availability and how many courses?

- Know the answer before Tuesday. Do not improvise this.
- The role is capped at 0.40 FTE, typically one or two courses a session.
- Safe answer: start with one, see how the session rhythm fits alongside the full-time load, and scale from there. Committing to two and delivering one is worse than starting at one.
- Flag the Educause conference, 29 September onward, if scheduling comes up.

THE ARCHAMBAULT HOOK USE ONCE, DO NOT FORCE IT

- She published on **supporting adjunct faculty across career stages at a small community college** in 2026. Michelle is full-time community college faculty who supervises and mentors adjuncts, and would be entering ASU as an adjunct herself.
- Natural moment: if asked why this role, or at the end when asking questions.
- Phrasing: "I saw your recent work on supporting adjunct faculty across career stages. I am on the other side of that at my college, I am the eCourses lead supporting about 30 instructors, most of them adjunct. I would be curious how the program thinks about onboarding and supporting associates here."
- That question does three things at once: shows she read her work, shows she does the work, and asks something she actually wants to know.

QUESTIONS TO ASK THEM PICK THREE, LEAVE TIME

- **The design line:** "Where is the boundary between what an associate adapts and what stays fixed in the master course?"
- **Onboarding:** the Archambault question above.
- **For Salik:** "I read about the AI mentors in the M.Ed. How have students responded, and has it changed what you ask instructors to do?"
- **Practical:** "How does the pool work? Is it session by session, and how much notice do associates usually get?"
- **Also practical, and fine to ask:** per-course compensation. It was not published anywhere findable. Asking is normal for an adjunct pool.
- Do not ask all five. Thirty minutes with three people goes fast.

GUARDRAILS HOLD THE LINE ON THESE

- She **led the campus LMS team and contributed to the RFP** that led to Canvas adoption. She did **not** lead or run the Blackboard-to-Canvas migration and was not on the migration team.
- Never "scaled a platform to 250,000 users."
- She **co-chairs a domain** of the district AI committee, not the whole committee.
- The **M.Ed. carries the degree requirement**. The bachelor's is a BFA, not in education. That is fine, and the BFA is an asset for LDT 503, but do not let it stand in for an education degree.
- Every tool is a **prototype or in testing**. Nothing is in production. Say so before they ask.
- The AVC 100 completion numbers are **early, from two small summer sections**. Say that when citing them.

LOGISTICS

WHEN	Tuesday 22 September 2026, 30 minutes
WHERE	Zoom. Scheduled through this Calendly link (the corrected one Leanna sent 18 Aug)
WHO	Leanna Archambault, Steve Salik, Angel Morgan
APPLIED	18 April 2026 via Interfolio, Pool Position #178377
SENT	Blomberg_CV, Blomberg_CoverLetter_ASU_adjunct, blomberg_references
CHECK	It is not on the Google Calendar. Confirm the booking went through.

Full job and program detail in `job-description.md`. Submitted resume in `blomberg_resume_asu.pdf`. Compensation and retirement modeling is deliberately **not** in this folder. It lives in the private Retirement folder outside the repo.
