Golden, CO 80401

Dear Hiring Committee:

RE: AI Solutions Manager

I co-led the Innovation Center at Glendale Community College for seven years: the platforms, the developers, the service agreements, and the evaluations and requests for proposal behind the college's technology decisions. Then I spent a decade teaching inside one of the departments those systems served. Now I co-chair a domain of the AI Resource Center at the Maricopa Community Colleges, ten colleges and more than 140,000 students, and the work I do there is the intake side of agentic AI.

I designed and built the intake itself: a submission pipeline that takes both what a college already has and what it wants, scores each across six dimensions and sorts the result into four dispositions: this becomes a pilot, this needs more discovery, this is a training problem rather than an AI problem, and this we decline. It is built, and the request track opens once the inventory is complete, so it has not taken its first request yet. I am currently running a ten-college study to find where agentic workflows can remove routine work from advising staff, and evaluating candidate solutions against what it surfaces, including meeting student-success platform vendors at EDUCAUSE this month to look at AI plug-ins and solutions. I also wrote the framework, now in review with the district AI CIO, for moving an approved idea into a sandboxed pilot and then into production so that nothing remains in pilot indefinitely. The domain is a year old and this work is early.

- **Bachelor's degree, or substantially the same knowledge through work experience and instruction.** I hold a Master of Education in educational technology. My bachelor's degree is in visual communications. That degree started me in identity systems and website interfaces, and it is still why I design the form, the briefing, and the interface myself instead of specifying them for someone else.
- **Five or more years of progressively responsible experience across technology enablement, change management, adoption planning, and enterprise technology implementation.** Seven years co-leading that Innovation Center: I defined requirements, wrote ITIL service agreements, managed cross-functional development teams to delivery, ran a platform evaluation and request for proposal against vendor alternatives, and stood up the campus-wide single point of contact helpdesk. Earlier, three years as a product manager for web-delivered education software, authoring requirements that engineers built from and running usability studies.
- **Assessing AI opportunities on business value, feasibility, risk, readiness, and adoption impact, and evaluating technology solutions.** That is the current work. I built a 52-agent journey study, fifty student personas plus an orchestrator and an aggregator, that walks real tasks through the systems a student actually has to use: the public web, then the signed-in portal and the enterprise systems behind it, each tier gated on its own data governance approval. The first tier has run two rounds across all ten colleges. The output is a ranked roadmap that says which items a machine should answer and which belong with a person.
- **Connecting recurring needs across departments so solutions scale instead of repeating.** The crosswalk exists because the same service carries a different name at every college, which hides the fact that a problem stalling students at one campus often already has a working process at another. Finding that match is usually cheaper than building anything, and I would rather give a department a practice a colleague already operates than commission a tenth version of it.
- **Working knowledge of generative AI concepts, responsible AI principles, limitations, and prompt engineering.** I build the tools, not only the plans: a student career platform entering its first pilot this fall, built so its AI layer can be directed to whichever model an institution sanctions, a multilingual support routing tool in a program-wide pilot, and a course quality suite whose core checks are deliberately rule-based with no model in them, so the same input returns the same answer every time.
- **Organizational change management, stakeholder engagement, training, adoption, and value realization.** I brought a campus onto its first learning management system from nothing: no platform, no standards, and no faculty using one. I co-authored the proposal that established the college's teaching and learning center, and contributed to the charter for the faculty-run committee that set online course standards college-wide. I designed and taught a faculty development course on teaching online, ran an eight-year professional development series on course design, assessment and retention, and have coached faculty individually as a Quality Matters and OSCQR lead reviewer since 2011. Most recently I convened a campus AI community of practice: a guiding coalition of early adopters from faculty, staff and administration, formed to demonstrate the practice rather than to document it.

I live two miles from campus in Golden, and I would welcome the opportunity to discuss the pipeline you are building and where I could contribute.

Sincerely,

Michelle Blomberg

PROFESSIONAL SUMMARY

Co-led a campus instructional technology center for seven years and the platform selections, service agreements, and developers behind it, then spent a decade teaching inside one of the departments those systems served. Co-chairs the Student Support and Success domain of the Maricopa AI Resource Center, where the work is the intake and prioritization side of agentic AI across ten colleges and more than 140,000 students: locating where agentic workflows can streamline the student experience, weighing vendor products against existing enterprise capability and against building, and carrying what survives into pilots with defined success measures. Selected, stood up, and drove adoption of campus learning platforms and the campus-wide single point of contact helpdesk. Builds the tools as well as the plans, on a hard no-student-data line.

EXPERIENCE

Co-Chair, Student Support and Success Domain

2025 – Present

AI Resource Center, Maricopa Community Colleges

- Co-chair one of the district AI Resource Center's domains and serve on its steering committee, across ten colleges serving more than 140,000 students at 31 locations. Held concurrently with a faculty appointment.
- Run the intake and prioritization work behind that district AI strategy, scoped to locate where agentic workflows can streamline the student experience: a cross-college service crosswalk, in draft across all ten colleges and out to campus representatives for verification, a 52-agent journey study against a 46-task taxonomy, barriers scored on a Nielsen severity rating and held as candidates until human rating, a gate built into the instrument from the start, and a prioritization model that separates what an agent should answer from what belongs with a person.
- Designed that study as a three-tier agent system: fifty persona agents held to one student's knowledge, device, and patience, each attempting a real task on a live college site; an orchestrator that assigns runs and watches for saturation; and an aggregator that ranks by severity and refuses to carry forward anything the run logs do not support.
- Corrected the method mid-study when four first-pass findings collapsed on inspection: introduced a two-tier evidence rule separating what a retrieval result can claim from what an opened page can claim, and applied it retrospectively across the whole corpus rather than only forward.
- Connect findings across colleges rather than solving them one at a time: because the same service is named differently at each campus, a barrier at one college often already has a working process at another. Surfacing that turns ten one-off builds into one fix colleges can adopt instead of commission.
- Take those findings into solution evaluation across three paths, vendor products, existing enterprise capability, and building: currently scheduling conversations with student-success platform companies at EDUCAUSE about AI plug-ins and solutions.
- Authored the framework, now in review with the district AI CIO, for moving a faculty-built AI tool from prototype to a sandboxed district-hosted pilot to production, adapting the NIST AI Risk Management Framework, EDUCAUSE governance guidance, and ITIL practice.
- Served on the cross-domain team that produced the district student AI explainer, a Student Support and Success collaboration with the Teaching and Learning domain, released to the ten colleges.

Residential Faculty and Program Director, Digital Media

2011 – Present

Glendale Community College, Glendale, AZ

- Founded a campus AI community of practice through the Center for Teaching, Learning and Engagement, a group of advanced AI practitioners and early adopters drawn from faculty, staff and administration, convened to lead by example.
- Design and deliver the faculty development that carries technology adoption: authored and taught a fully online course preparing instructors to design and teach online; ran an eight-year professional development series on course design, assessment and retention; coach faculty individually as a campus-wide Quality Matters and OLC/OSCQR lead reviewer; and led the emergency transition of more than 45 Art and Humanities faculty to fully online teaching in weeks.
- Assess and demonstrate AI tools for faculty and district leadership, translating model behavior, integration patterns, and data handling into plain language for non-technical decision-makers.
- Faculty representative on the college intranet redesign committee, evaluating information architecture and interface design as a practitioner.
- As Program Director from 2011 to 2022, set program strategy and ran the formal three-year program review against district enrollment and completion data and Bureau of Labor Statistics occupational data: degrees awarded rose roughly 75 percent while enrollment stayed flat, and a campus-wide students-per-full-time-faculty comparison made the case that won the program a second full-time faculty line.
- Built the program's degrees into the district's first Near Zero textbook-cost pathways, fully open educational resources, removing textbook cost for every student in the program and recognized with a college award.
- Redesigned the program's highest-enrollment course after analytics flagged a low success rate, rebuilding it from retention data and embedded support services; on an end-of-course survey, student apprehension toward the software fell from 3.3 to 2.0 and "I know where to go for help" rose from 3.4 to 4.8.

Director of Instructional Technology

2004 – 2011

Glendale Community College Innovation Center, Glendale, AZ

- Co-led the campus Innovation Center and its team, including three developers, the central function every teaching and learning technology on campus ran through.
- Brought the campus onto its first learning management system from nothing: no platform, no standards, and no faculty using one. Ran the evaluation and request for proposal against vendor alternatives, set the standards, and drove adoption across faculty and staff.
- Led the campus LMS team and contributed to the district request for proposal that later led to Canvas adoption.
- Defined requirements, wrote ITIL service agreements, and managed cross-functional development teams delivering technology solutions on time and within budget.
- Established the campus-wide single point of contact helpdesk, consolidating support that had been split across separate offices and numbers, improving support efficiency and recognized with the college Kudos Award.
- Established the campus's first design system: the standards, templates, and style guides for course design, web interfaces, and digital communications college-wide.
- Introduced a modular content reuse system on the campus enterprise learning platform so faculty could build once and reuse across courses while keeping shared content consistent across sections.
- Co-authored the proposal establishing the college's Center for Teaching, Learning and Engagement, benchmarking district models and recommending a faculty-led structure.
- Co-led the district learning platform committee for the ten-college system, contributing to change control, upgrades, testing, and vendor relations.

Online Learning Coordinator

2002 – 2004

University of Michigan College of Engineering, Ann Arbor, MI

- Led quality assurance for every online course in one of the largest Six Sigma online programs, designing structures that delivered a single program in three formats: online, in person, and live online.
- Implemented an organization-wide incident and request tracking system and trained all staff on it.
- Worked daily with engineering faculty and subject-matter experts to design and build courses for a working-professional STEM audience.

Product Manager, Higher Education

1999 – 2002

ProQuest Information and Learning, XanEdu, Ann Arbor, MI

- Owned end-to-end product development for web-delivered educational software, authoring requirements engineers could build from, running usability studies, and translating user research into structured roadmaps.
- Partnered across engineering, sales, and marketing to prioritize the roadmap and advocate for user needs.
- Built product integrations with partner channels including AOL, Blackboard, and WebCT, learning how institutional buying cycles, decision-makers, and pain points shape what higher education customers will actually adopt.

PRODUCT AND PROTOTYPE WORK

AI Pilot Governance Framework, Maricopa District AI Resource Center

2026

- A path for taking a faculty-built AI tool off a personal server and running it as a safe district-hosted pilot, then into production: one-page intake and registry, isolated container hosting, an approved-API path, guardrails for data minimization, FERPA, human oversight, transparency, and a sunset date, and an evaluation gate so nothing sits in pilot indefinitely.
- Adapted from the NIST AI Risk Management Framework, EDUCAUSE AI governance guidance, WCET, and ITIL practice into a path a faculty member can follow, every option screened against a hard no-student-data line. In review with the district AI CIO.

Course Quality Suite, Glendale Community College

2026 – Present

- A drop-in tool that reads a course export and checks it against the SUNY OSCQR rubric and institutional requirements: seat time and workload, measurable objectives and their cognitive level, outcome alignment, and accessibility, then writes approved fixes back into a reimportable package. A companion tool checks a syllabus against district regulation and returns what is missing, with the correct wording inline.
- Those checks use no model at all, so the same course returns the same answer every time, and they run entirely client side with nothing transmitted and no account or server, because the source files carry no student data.
- A second layer does use a model, on the part that needs judgment: it reads each graded item for AI resistance, flags the ones a model could complete on the student's behalf, and returns recommendations for rebuilding those around evidence of process. In testing across the department.

Render, Student Career Platform, Glendale Community College

2026 – Present

- Owned end to end from discovery and user research through journey design, requirements, build, and usability testing. Students start with a job search agent, then add hiring panel agents, interview building agents, and a career counselor agent that stays with them through the semester. The tool is training wheels for agentic work: students leave with their own bank of agents to keep using and extending after graduation.

- A single self-contained HTML file with about twenty single-shot AI skills, one per section, a spreadsheet and script data flow for anonymous Career Services reporting, and no student personally identifiable information. Every AI call runs through one request function, so pointing the tool at a different sanctioned model changes one place rather than the build. Usability tested with students in spring 2026 and revised from what it surfaced. In a student pilot this fall.

Multilingual Student Support Routing Tool, Glendale Community College 2026 – Present

- An AI triage tool that lets a student describe a problem in their own language, typed or spoken, and routes them to the right human service with a handoff card carrying contact details, hours, and what to ask for. Built on 14 service modules and more than 100 hand-verified service links.
- Designed so routine questions are answered inline and everything else reaches a person faster, framed as removing routine work from advising staff rather than replacing them. In a program-wide pilot in the department.
- Built to hand off: the curated questions, the plain-language triage, and the verified service links are portable to whichever enterprise platform the district adopts. The tool runs locally in the meantime rather than waiting on that timeline.

Autonomous Agents and Workflow Automation, program and personal builds 2025 – Present

- Build and run scheduled agents that take routine searching and checking off a person entirely. One posts verified entry-level jobs and internships to the student community every weekday, so openings reach students instead of students having to go looking. Others run the same pattern against different sources.
- Each agent opens and reads every source before republishing it, rather than treating a page that loads as a posting that is still open, drops anything closed or moved, and reports what changed. Built on the Claude API with Google Apps Script and Sheets.

EDUCATION

Master of Education, Educational Technology, Northern Arizona University 2017

Bachelor of Fine Arts, Visual Communications, Eastern Michigan University 1998

CERTIFICATIONS

AI for Instructional Design, Collaborating with Intelligent Systems, EDUCAUSE 2026

Google Generative AI Leader (GAIL) Training, Google 2026

League for Innovation AI Fellows, selective national cohort 2026

AI Fluency: Framework and Foundations Certificate, Anthropic Academy 2026

Teaching AI Fluency Certificate, Anthropic Academy 2026

Claude Code in Action Certificate, Anthropic Academy 2026

AI Fluency for Educators Certificate, Anthropic Academy 2026

Claude 101 Certificate, Anthropic Academy 2026

Introduction to Claude Cowork Certificate, Anthropic Academy 2026

Professional Scrum Product Owner I (PSPO I), Scrum.org In progress

Prompt Engineering, Purdue University 2025

SERVICE AND GOVERNANCE

Founder, AI Community of Practice, Glendale Community College 2026 – Present

Instructional Council, Curriculum Development, Maricopa Community Colleges 2010 – 2016, 2025 – Present

eCourse Lead Reviewer, Quality Matters and OSCQR, Glendale Community College 2011 – Present

HLC Accreditation Committee, Criteria 3 and 5, Glendale Community College 2010 – 2012, 2020 – 2022

LMS Advisory Group, Maricopa Community Colleges, Co-Chair 2009 to 2010 2004 – 2013, 2019 – 2020

Guided Pathways Committee, Maricopa Community Colleges 2017 – 2019

President's Technology Advisory Taskforce, Glendale Community College 2004 – 2010

Conference Session Reviewer and Campus Representative, EDUCAUSE 2005 – 2010

SELECTED PRESENTATIONS

Building Career Tools That Outlast the Semester, Mesa CC AI Summit 2026

eCourses Lunch and Learn Series, Glendale Community College 2015 – 2023

Course Collaboration with Career Services, Library and Tutoring, GCC 2017

Virtual Field Trips with YouTube VR, Northern Arizona University 2017

STEAM Diaries, League for Innovation STEMTech Conference, Phoenix 2015

Online and Hybrid Art Classes, Maricopa Technology Conference, Mesa 2012

Planning for the Blackboard Content System, Blackboard World Conference 2007

TECHNICAL SKILLS

Generative and agentic AI: Claude and the Claude API, Claude Code, ChatGPT, Google Gemini, Microsoft Copilot; prompt and system-prompt engineering including tiered routing; multi-agent orchestration; scheduled autonomous agents; retrieval and grounding against a curated corpus; agent reliability practice including source verification before publication and repeat-run consistency checks.

Responsible AI and governance: NIST AI Risk Management Framework, EDUCAUSE AI governance guidance, FERPA, data minimization and no-PII architectures, human-in-the-loop design, transparency and sunset criteria.

Accessibility: WCAG 2.1 AA, Section 508, ADA remediation, YuJa Panorama, CidiLabs UDolt.

Change management and adoption: stakeholder discovery, readiness assessment, adoption planning, communication plans, training materials and knowledge articles, facilitation and workshops, executive and governance briefings.

Intake, prioritization and delivery: AI opportunity intake and registry design, use-case development, value and feasibility assessment, severity rating and prioritization, roadmapping, requirements definition, vendor evaluation and technology selection, ITIL service agreements.

Research and measurement: task-based usability testing, journey mapping, service blueprinting, personas, heuristic evaluation, pre and post survey design, outcome and adoption measures.

Platforms and build: Canvas administration, LTIs and course packaging, Google Workspace and Apps Script, HTML, CSS, vanilla JavaScript, GitHub Pages, Python basics, Figma, Miro, Qualtrics, Jotform.
