

Michelle Bloomberg

I build AI tools that help educators and students, and I help institutions adopt them safely.

A few things I have built

Dial Your Course · In testing

A drop-in Canvas course-quality auditor that runs nineteen standards checks and writes fixes back into a reimportable package. No student data leaves the browser.

Render · In a student pilot this fall

A student career-launch tool: resume and interview practice, a skills-gap analysis, and a portable career agent the student keeps after graduation. First name only, no PII.

AI adoption governance · In use with district AI leadership

The framework that moves a prototype into a governed, FERPA-aware pilot and then production: a lightweight intake, an approved-tool menu, and human-in-the-loop guardrails.

Student-support routing · Prototype that became a district platform

A chatbot I built and tested that routes students to the right service in their own language. It moved leaders to adopt an enterprise platform, and I co-lead the rollout across three campuses, scaling to ten.

Ten-college student-journey study · In the field this fall

I co-chair a ten-college district AI strategy for student support: fifty-plus services mapped, three research personas, and every barrier severity-rated to find where AI helps and where a person is the right answer.

What I am looking for

Teams building with AI in education who want someone who can build, coach, and set the guardrails: AI enablement and adoption, learning experience and instructional design, solutions and implementation. Full-time, contract, or a pilot.

Let us talk about a pilot, a role, or bringing this to your team.
