PROFESSIONAL SUMMARY

Onboarding and adoption lead who takes faculty and staff from a new tool's first login to confident, everyday use. Spent seven years as Director of Instructional Technology bringing a campus onto one learning management system, through an evaluation, a pilot with early adopters, shared course standards and a campus-wide helpdesk, and has been full-time faculty on the other side of those rollouts ever since. Founded a campus AI community of practice of 30 faculty, staff and administrators, sits on the steering committee of the Maricopa AI Resource Center, and co-chairs its Student Support and Success domain, where adoption travels across ten colleges by influence, with no direct authority over any of them. Decades of training and coaching sit behind that AI work, which is recent: an eight-year professional development series, a faculty course on teaching online, and individual coaching as a lead course reviewer since 2011. Builds with AI every day, with tools in use and in pilot with students and faculty.

EXPERIENCE

Co-Chair, Student Support and Success Domain 2025 – Present

AI Resource Center, Maricopa Community Colleges

- Sit on the steering committee of the district AI Resource Center and co-chair one of its domains, across ten colleges serving more than 140,000 students at 31 locations. Adoption moves by influence: the role carries no direct authority over any college. Held concurrently with a faculty appointment.
- Drafted an AI pilot framework, in review with the district AI CIO: the stages, owners, milestones and exit criteria for moving a faculty-built AI tool from a first build to a pilot to production, adapted from the NIST AI Risk Management Framework, EDUCAUSE governance guidance and ITIL practice.
- Building a cross-college service crosswalk, in draft across all ten colleges and out to campus representatives for verification. Because the same service is named differently at each campus, a barrier at one college often already has a working process at another, which turns ten one-off fixes into one that colleges can adopt.
- Designed and am running a ten-college student journey study, in progress, with ten sets of stakeholders: 52 AI agents (fifty synthetic student personas, an orchestrator and an aggregator) attempt a 46-task taxonomy on live college sites. Phase one, the public sites of all ten colleges, is complete. Barriers are rated on a Nielsen severity scale and held as candidates until a human rates them.
- Served on the cross-domain team, a collaboration with the Teaching and Learning domain, that produced the district student AI explainer released to the ten colleges.

Residential Faculty and Program Director, Digital Media 2011 – Present

Glendale Community College, Glendale, AZ

- Design and deliver the training that carries technology adoption: faculty workshops, a fully online course I authored and taught that prepares instructors to design and teach online, and an eight-year lunch and learn series on course design, assessment and retention.
- Coach faculty one-on-one as a campus-wide Quality Matters and OSCQR lead reviewer since 2011 and as eCourses coordinator: review each online course against a published rubric, write up the findings, and stay with the instructor through the changes.
- When the college moved to remote teaching, ran a condensed training for more than 45 Art and Humanities faculty on making videos and using Canvas, then mentored instructors one-on-one until their courses were online.
- Founded a campus AI community of practice through the Center for Teaching, Learning and Engagement: 30 advanced AI practitioners and early adopters from faculty, staff and administration, meeting monthly and convened to lead by example and to share what works.
- Share AI tools and AI workflows in that community and in AI Resource Center meetings, explaining how each tool behaves, what it connects to and what data it handles in plain language for non-technical colleagues, and showing when Claude, Microsoft Copilot, ChatGPT or Google Gemini is the right fit for a task.
- Write things down once so the same question does not have to be answered twice: reusable prompt and skill libraries, templates, checklists and plain-language guides for colleagues and students.
- As Program Director for eleven years, from 2011 to 2022, kept many things moving at once: hiring and supervising adjunct faculty, roughly 20 student interns a year, each completing a 120-hour internship, and formal three-year program reviews. Degrees awarded rose roughly 75 percent while enrollment stayed flat, which won the program a second full-time faculty line.
- Measure against a baseline: redesigned the program's highest-enrollment course after analytics flagged a low success rate. On a pre and post course survey, student apprehension toward the software fell from 3.3 to 2.0 and "I know where to go for help" rose from 3.4 to 4.8.
- Started and led an experiential design studio as a course from 2011 to 2023, taking student teams through client kickoff, a written brief, proof cycles and delivery on the client's deadline. It lives on as a grant-funded, paid studio led by other faculty.

Academic Associate, Learning Design and Technologies Beginning January 2027

Arizona State University, Mary Lou Fulton College for Teaching and Learning Innovation

Appointed to teach in the fully online Master of Education in Learning Design and Technologies program, delivered through ASU Online. Part-time.

Director of Instructional Technology 2004 – 2011

Glendale Community College Innovation Center, Glendale, AZ

- Brought the campus onto one learning management system: ran the evaluation and request for proposal with the Director of Training, set the standards, and drove adoption across faculty and staff.
- Not every instructor wanted it. Ran a pilot with early adopters, and others joined once they saw how easy it was, until almost all faculty were teaching in Blackboard.
- Led the campus LMS team and contributed to the district request for proposal that later led to Canvas adoption.
- Supported the tools that plug into the LMS, including LTI tools, from the campus side: turned them on in courses, supported the faculty using them and worked through problems when they came up.
- Established the campus-wide single point of contact helpdesk, bringing support that had been split across separate offices and phone numbers behind one number; recognized with the college's OIT Technology Award.
- Set the campus standards, templates and style guides for course design, web interfaces and digital communications, so a course built by one instructor looked and worked like the next.
- Co-led the campus Innovation Center and its team, including three developers, the place faculty came for help with teaching and learning technology.
- Defined requirements, wrote ITIL service agreements, and managed cross-functional development teams delivering technology projects on time and within budget.
- Introduced a modular content reuse system on the campus learning platform so faculty could build once and reuse across courses while keeping shared content consistent across sections.
- Co-led the district learning platform group for the ten-college system, contributing to change control, upgrades, testing and vendor relations.
- Co-authored the proposal establishing the college's Center for Teaching, Learning and Engagement, benchmarking district models and recommending a faculty-led structure.

Online Learning Coordinator 2002 – 2004

University of Michigan College of Engineering, Ann Arbor, MI

- Led quality assurance for every online course in one of the largest Six Sigma online programs, designing structures that delivered a single program in three formats: online, in person, and live online.
- Implemented an organization-wide incident and request tracking system and trained all staff on it.
- Worked daily with engineering faculty and subject-matter experts to design and build courses for working professionals.

Product Manager, Higher Education 1999 – 2002

ProQuest Information and Learning, XanEdu, Ann Arbor, MI

- Owned product development for web-delivered educational software at an education technology company: wrote the requirements engineers built from, ran usability studies, and turned user research into roadmaps.
- Built product integrations with partner channels including AOL, Blackboard and WebCT, learning how buying cycles, decision-makers and pain points shape what higher education customers will adopt.
- Partnered across engineering, sales and marketing to set roadmap priorities and speak for user needs.

Graphic Designer, Q LTD, Ann Arbor, MI 1997 – 1999

- Worked on large web projects alongside the authors of Information Architecture for the World Wide Web, contributing to user research and usability studies.
- Designed identity, web and print work for the studio's clients.

AI TOOLS BUILT

Course Review Tool, Independent build 2026 – Present

- Reads a course export from the LMS and checks it against the SUNY OSCQR rubric and institutional requirements: seat time, measurable objectives, outcome alignment and accessibility. Version 1 is in use in the Digital Media Arts program, and a companion syllabus checker is in use in the Art and Humanities department.
- Built so a reviewer's checklist runs the same way every time and the instructor gets a specific list of what to fix. Version 2 is in development, with faculty testing next.

Student Support Routing Tool, Glendale Community College 2026 – Present

- An AI application built on the Claude API that lets a student describe a problem in their own language, typed or spoken, and routes them to the right human service with a handoff card carrying contact details, hours and what to ask for. Covers more than two dozen service areas and more than 100 verified service links.
- In pilot in the Digital Media Arts program's student community, where students are testing it; tested first with design studio students.

Student Career Tool, Glendale Community College 2026 – Present

- Walks a student through a job search with about twenty single-task skills. There is no AI service behind it: the tool writes the prompt, the student runs it in their own AI account and pastes the answer back. Owned from discovery and user research through requirements, build and usability testing.
- Usability tested with students in spring 2026, now piloting in phases with capstone students, starting with resume alignment. The full tool follows once the district turns on Gemini for student accounts.

Student Jobs Agent, program build 2025 – Present

- In production: posts verified paid entry-level jobs to the student community twice a week. Runs as a scheduled Claude task that posts through a Discord webhook.
- Opens and reads every source before posting it, drops anything closed or moved, and reports what changed, so a page that loads is never mistaken for a job that is still open.

EDUCATION

Master of Education, Educational Technology, Northern Arizona University 2017
Bachelor of Fine Arts, Visual Communications, Eastern Michigan University 1998

CERTIFICATIONS AND TRAINING

Exploring Generative AI for Learning Design, University of Michigan (Coursera) October 2026
Building Effective Human-Agent Teams Certificate, Anthropic Academy October 2026
AI for Instructional Design, Collaborating with Intelligent Systems, EDUCAUSE 2026
Taking Charge of Change (Prosci ADKAR), EDUCAUSE Microcredential 2026
Google Generative AI Leader (GAIL) Training, Google 2026
League for Innovation AI Fellows, selective national cohort 2026
AI Fluency: Framework and Foundations Certificate, Anthropic Academy 2026
Teaching the AI Fluency Framework Certificate, Anthropic Academy 2026
AI Fluency for Educators Certificate, Anthropic Academy 2026
Prompt Engineering, Purdue University 2025

SERVICE

Founder, AI Community of Practice, Glendale Community College 2026 – Present
Instructional Council, Curriculum Development, Maricopa Community Colleges 2010 – 2016, 2025 – Present
eCourse Lead Reviewer, Quality Matters and OSCQR, Glendale Community College 2011 – Present
LMS Advisory Group, Maricopa Community Colleges, Co-Chair 2009 to 2010 2004 – 2013, 2019 – 2020
HLC Accreditation Committee, Criteria 3 and 5, Glendale Community College 2010 – 2012, 2020 – 2022
President's Technology Advisory Taskforce, Glendale Community College 2004 – 2010
Conference Session Reviewer and Campus Representative, EDUCAUSE 2005 – 2010

SELECTED PRESENTATIONS

Building Career Tools That Outlast the Semester, Mesa CC AI Summit 2026
eCourses Lunch and Learn Series, Glendale Community College 2015 – 2023
Course Collaboration with Career Services, Library and Tutoring, GCC 2017
STEAM Diaries, League for Innovation STEMTech Conference, Phoenix 2015
Planning for the Blackboard Content System, Blackboard World Conference 2007

TECHNICAL SKILLS

Onboarding and adoption: faculty onboarding and training, implementation planning, kickoff through milestones, pilots with early adopters, one-on-one coaching, helpdesk and support operations, change management (Prosci ADKAR workshop), documentation and playbooks, templates and checklists, adoption without direct authority.
LMS and course design: Canvas, Blackboard, LTI tools from the campus side, course design standards, Quality Matters, OSCQR, Canvas analytics, accessibility to WCAG 2.1 AA.
AI tools and AI workflows: Claude every day, including Claude Cowork in the Claude desktop app, Claude Code and the Claude API; AI platforms built for higher education; Microsoft Copilot, ChatGPT and Google Gemini; prompt and system-prompt writing; scheduled agents; multi-agent orchestration; reusable prompt and skill libraries.
Project and stakeholder management: requirements definition, requests for proposal and vendor evaluation, ITIL service agreements, stakeholder discovery, communication plans, program review, Basecamp, Microsoft Project.
Training and facilitation: workshops, live sessions for faculty, staff and administrators, lunch and learn sessions, community of practice facilitation, conference speaking, plain-language guides and knowledge articles, presentation design.
Research and measurement: baselines, pre and post survey design, task-based usability testing, journey mapping, personas, Nielsen severity rating, Qualtrics, Jotform.
Platforms and build: Google Workspace, Discord, Figma, Miro, HTML, CSS, JavaScript, data minimization and human-in-the-loop design.
